

Project Structure

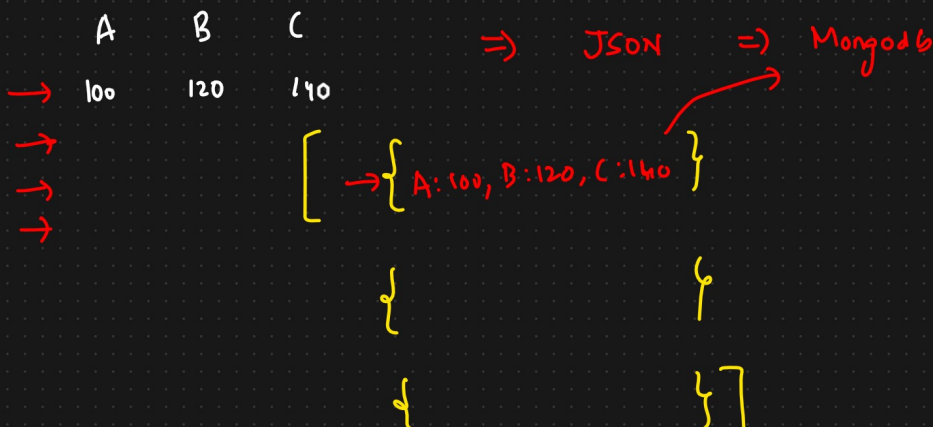

All the paths related information is stored in the data validation config

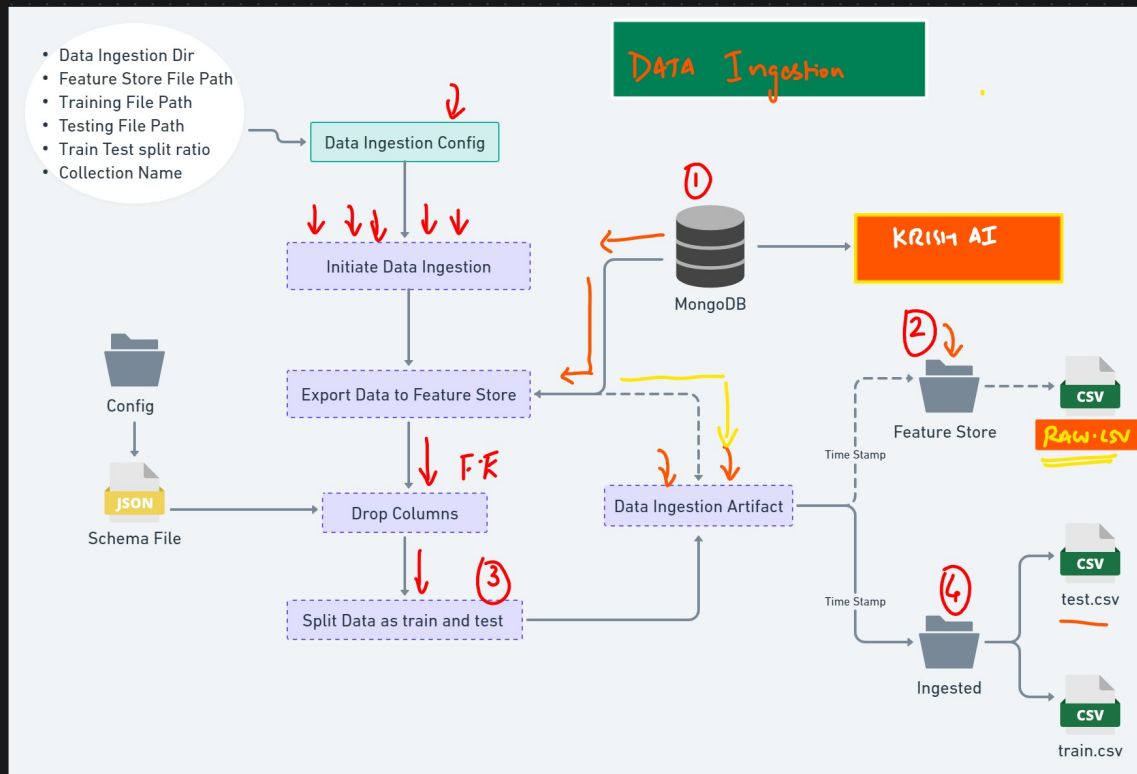

ETL Pipeline [Extract, Transform, Load]

Datat

Data Ingestion

if data drift happens we cant use the same data to train our model

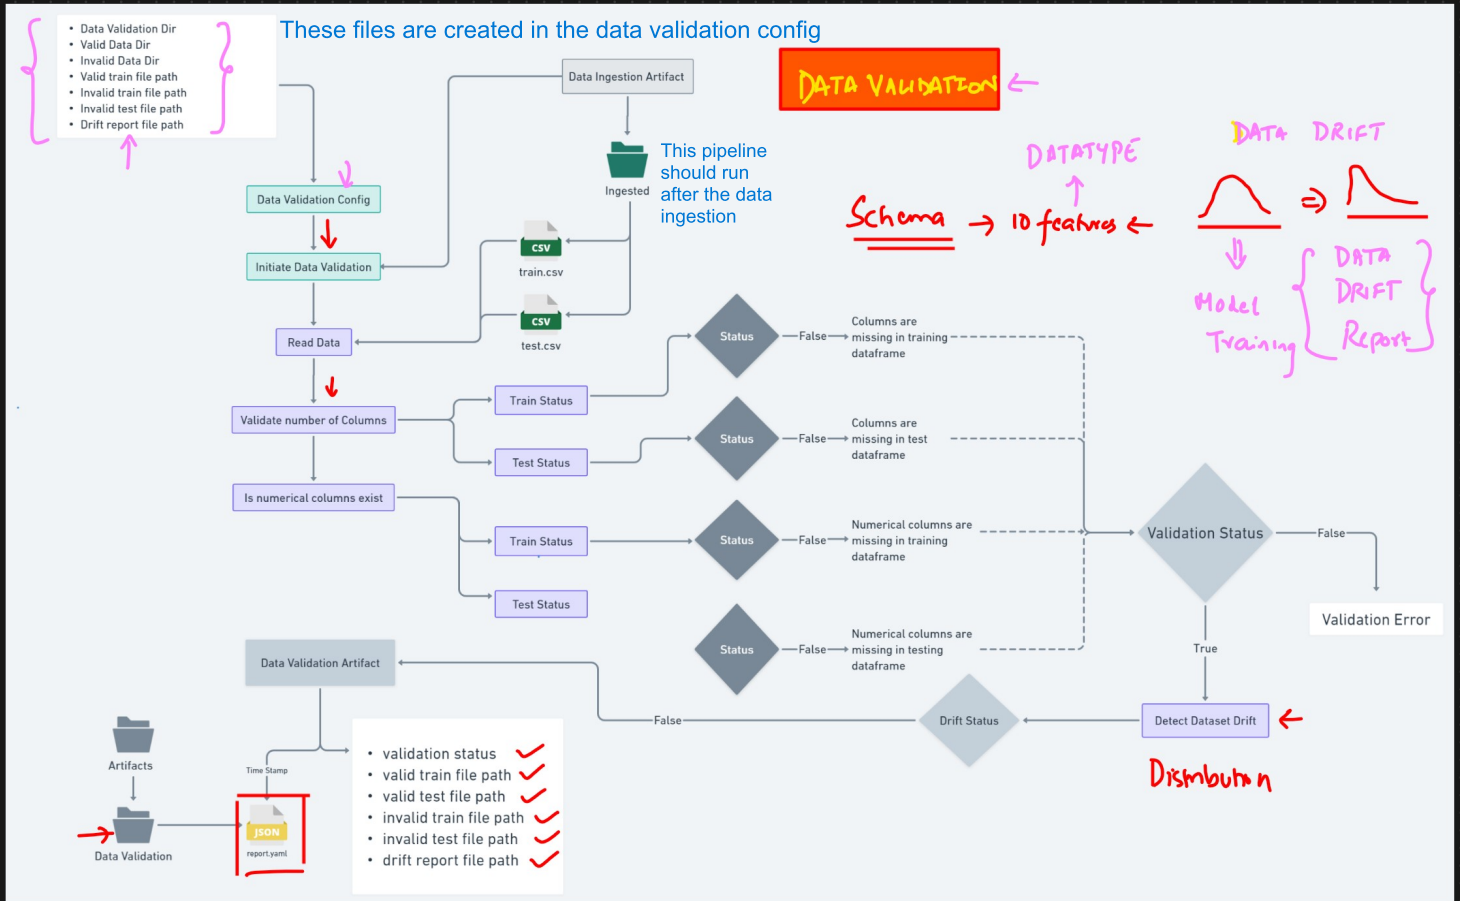

For this purpose we need to create the data drift report. to tell the developers about some chages happend/

DATA VALIDATION

① Same Schema → Same no of features

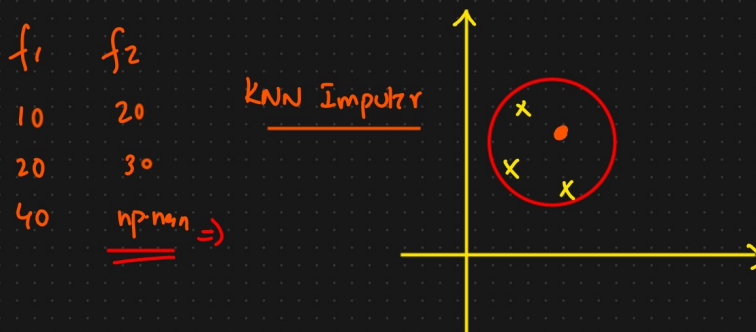

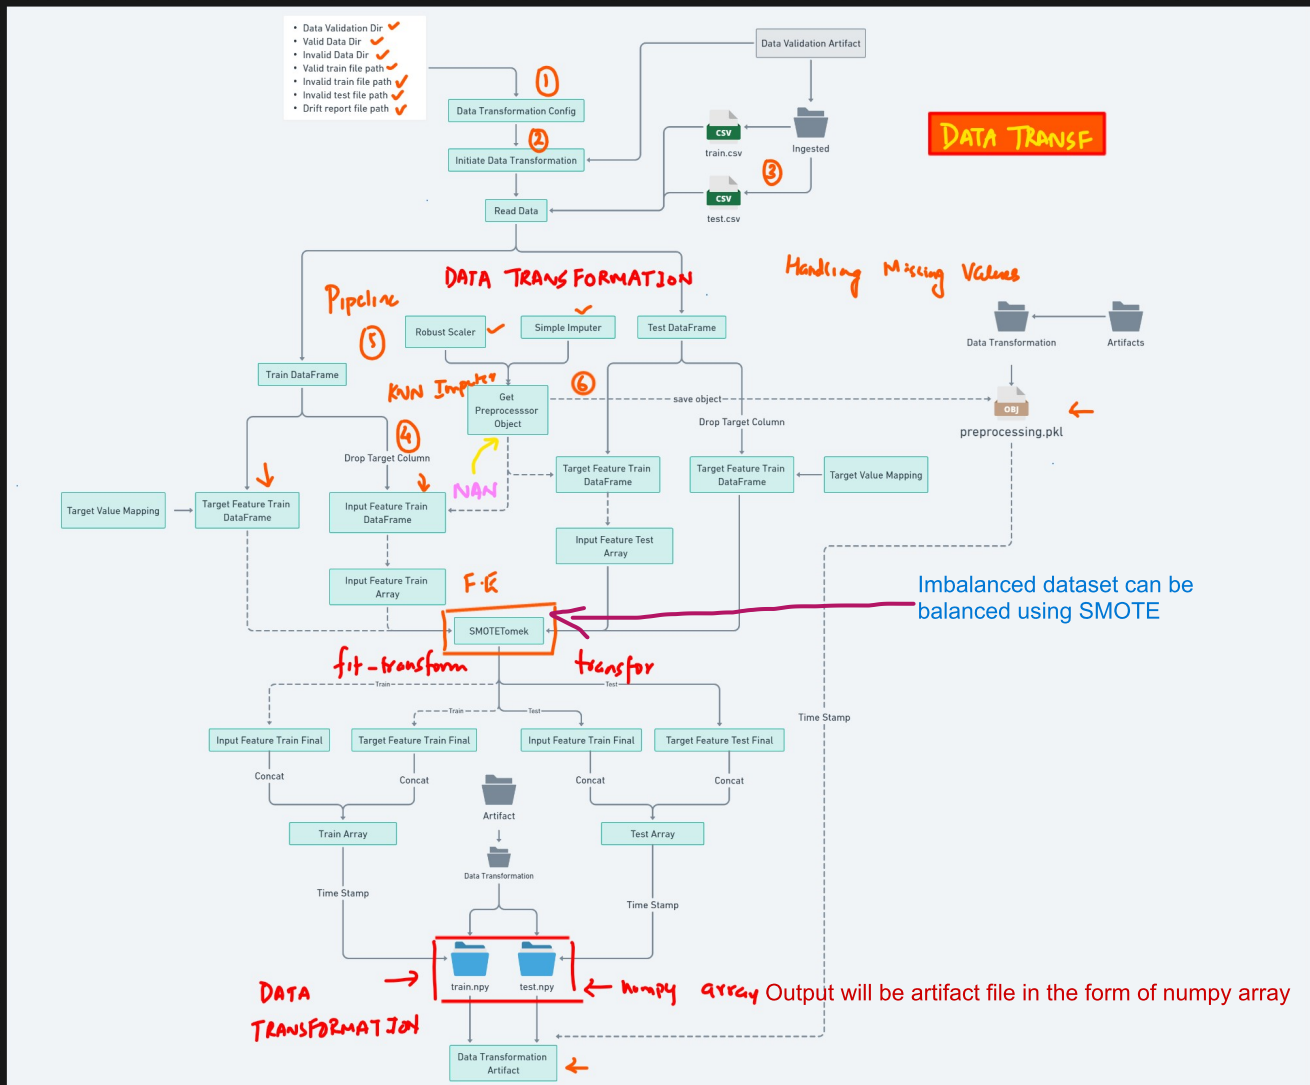

② DATA DRIFT

③ Validate No. of columns, Numerical Column exists.

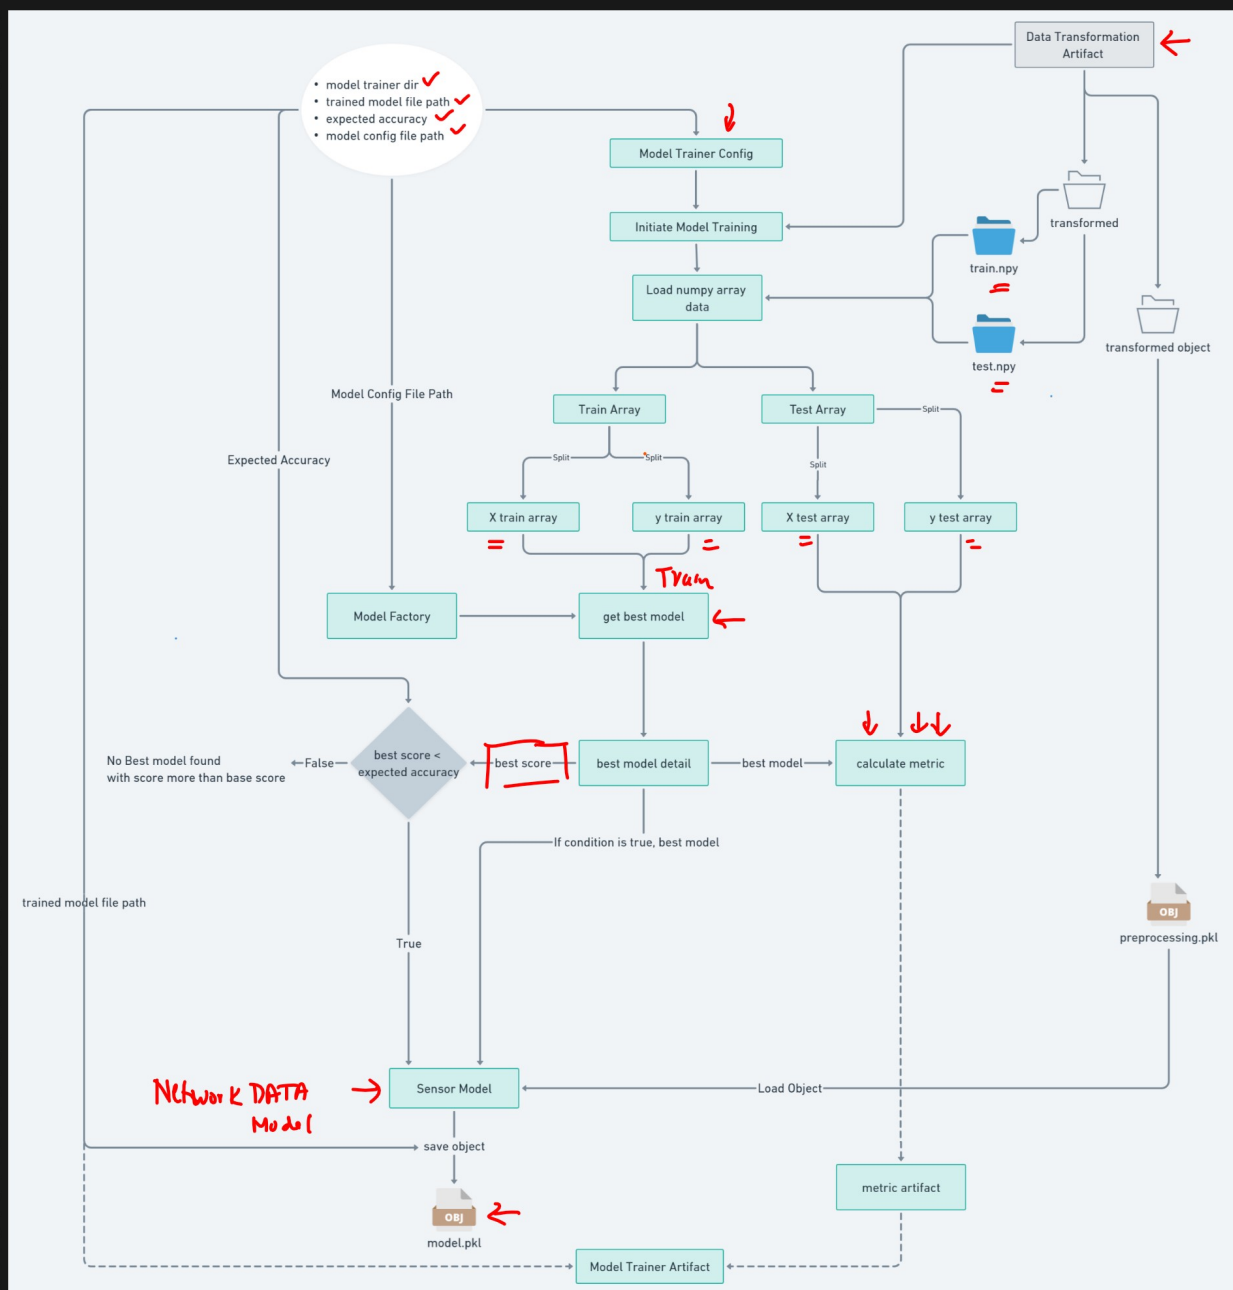

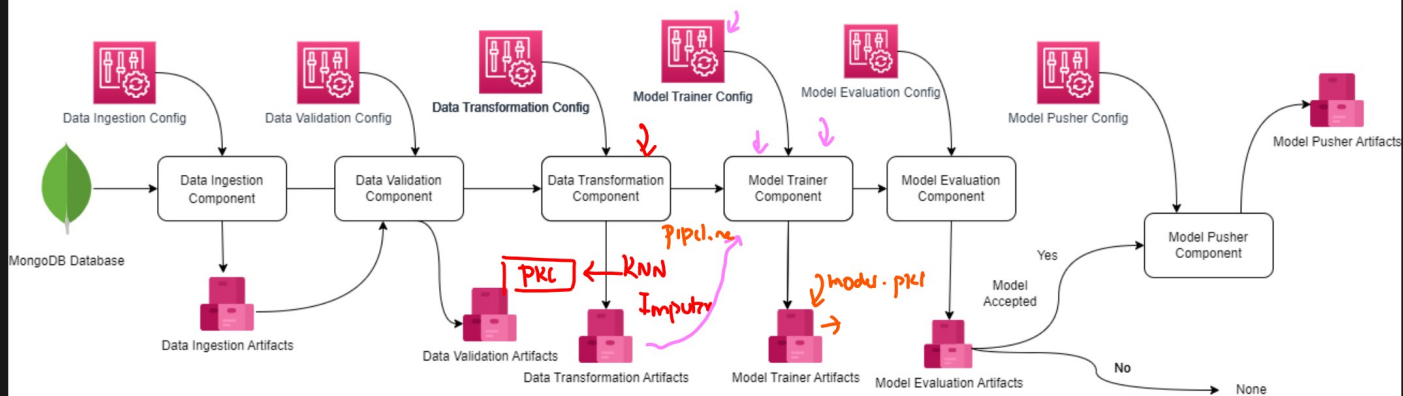

The distribution of data that we have for the training and the new data that we are specifically getting should be same.

DATA TRANSFORMATION

Model Trainer

Deployment [AWS EC2]
